## Software (free download)

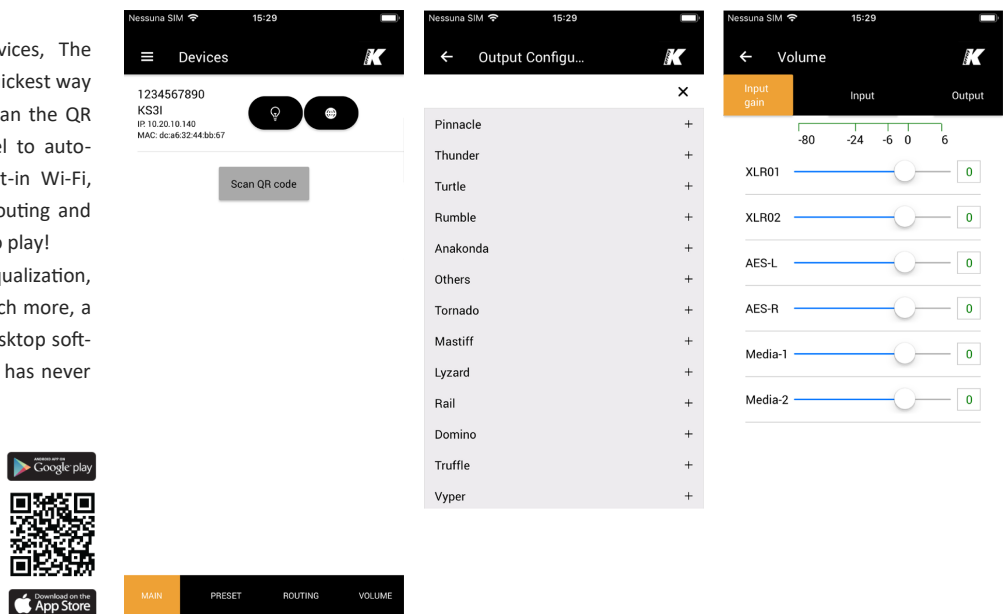

### K-FRAMEWORK3

Available for both Windows and Mac users, the K-framework 3 is K-array's proprietary 3D acoustical simulation and remote control software. In one single software you can design, simulate, configure, tune and manage K-array speakers, subwoofers, amplifiers and microphones. Data can be transferred from the 3D acoustical simulation environment to the connected devices in one click, while advanced monitoring tools will assist the operator during the entire show. Download the K-framework 3 software from the K-array website, and don't miss the complete video tutorial available on the K-academy page.

### K-ARRAY CONNECT

Available for both Android and iOS devices, The K-array Connect mobile is the easiest and quickest way to program and control K-array devices. Scan the QR code available on the amplifier back panel to automatically connect your phone to the built-in Wi-Fi, load the proper preset, select the signal routing and adjust the volume ... the amplifier is ready to play! For more advanced settings, including equalization, delay, internal player management and much more, a Web Application and the K-framework 3 desktop software are available. Controlling an amplifier has never been easier.
