## DIB-100

Number: 24.1140

### DI Boxes

For an optimum signal transmission from musical instruments to a mixer or amplifier. By using a transformer coupling, interferences due to matching problems, e.g. hum loops, are prevented to a large extent. Input and output are galvanically isolated. **For adapting line levels, please use units of the LTR series! DI box**

- 3-fold attenuation switch (0/-20/-40dB)
- Ground lift switch
- Instrument feed-through output
- Wideband balancing transformer
- Robust metal housing

## Technical Facts

### General Information

<b>Frequency range</b>	15-30,000Hz, $\pm 0$ dB
<b>Inputs</b>	50k $\Omega$
<b>Outputs</b>	600 $\Omega$ , XLR 50k $\Omega$ , jack
<b>Transmission ratio</b>	10:1
<b>Admiss. ambient temp.</b>	0-40 °C
<b>Dimensions</b>	74x45x130mm
<b>Weight</b>	650g
<b>Inputs</b>	6.3mm jack, unbal
<b>Outputs</b>	6.3mm jack, unbal., par. out XLR, bal.
